

# FOREX on AUTOPILOT

Trading Package

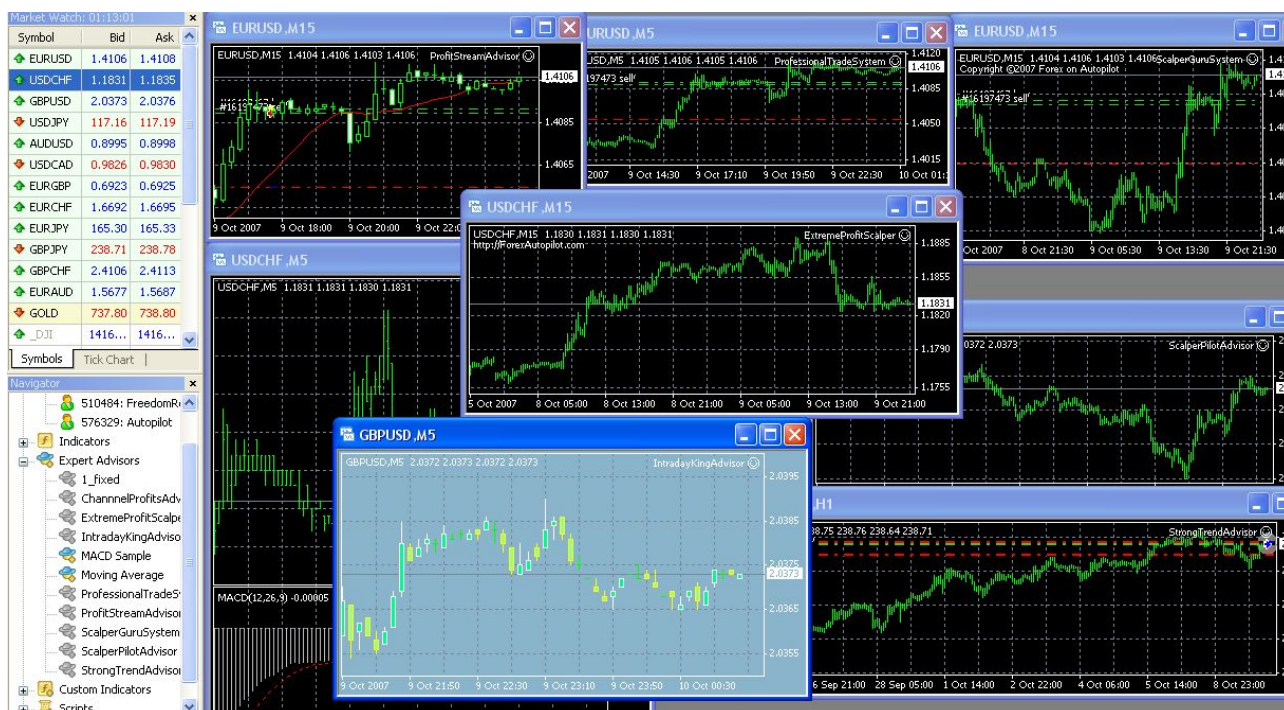

[www.ForexAutopilot.com](http://www.ForexAutopilot.com)

# Forex Autopilot Package includes:

1. ForexAutopilot Expert Advisor
2. NFP Bonus Expert Advisor
3. Ultra Trend Indicator
4. Advanced Forex Trading Ebook

Each Advisor is unique trading robot (expert) that monitors the market situation 24 hours/day and makes trades for you! Just keep your Metatrader4 on all the time even if you are away or asleep! Robots will do all the work for you to bring you good profits! Forex Market is open 5 days a week. No trades on weekends.

# Easy steps how to setup and run advisors

## Step1

Unzip the files from ForexAutopilot ZIP archive and place all advisors (files \*.ex4 like ForexAutoPilot.ex4) into /**experts** folder of your Metatrader4 directory.

**Usually c:\ProgramFiles\Metatrader4\experts or  
or C:\ProgramFiles\ForexTrader.Meta\Experts**

The path can differ depending of your broker.

### Known Questions and Problems:

**Don't have WinZip?** You can download free WinZip Evaluation Version <http://www.winzip.com/downwz.htm> to extract the Zip archive or just use free WindowsXP/Vista zip service. You can also use free WinRAR to unzip files: <http://www.rarlab.com/>

**Don't have Metatrader4?** You can get free Metatrader4 platform on ForexMeta broker website We recommend ForexMeta broker (FXDD) with MT4 <http://www.forexmeta.com/bonus1/> (100 usd signup bonus)

## Watch Video Tutorials:

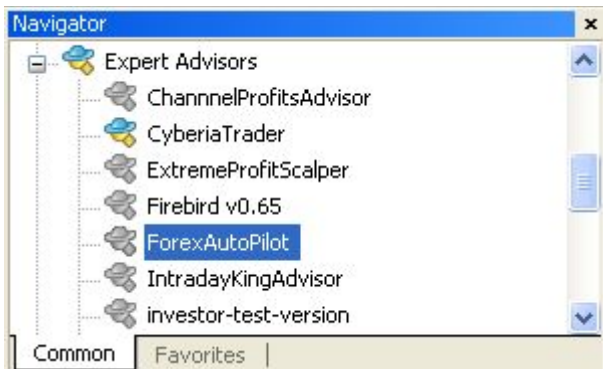

<http://www.forexmeta.com/videos/fap/>

## Step2

Run **Metatrader4** platform and open your Demo or Real account. We recommend you to trade on Demo until you feel confident with the systems.

You will see the list of ForexAutopilot advisors under **Navigator** menu in the left:

## Known Questions and Problems:

### Why are they shown in grey?

Experts-Robots are shown in grey because they don't have open source codes. That's fine. It is not the problem at all. They still work fine if they have smiling face on right top of attached graph. Template free MT4 experts like "MACD Sample" and "Moving Average" are free samples with open source that's why they are shown in yellow.

### I unzipped files and dropped them into the "expert" folder for meta trader, but they do not show up on the "navigator" list on the meta platform.

That could be the problem if you have several metatraders installed on your PC. Check if you copied them to correct folder of correct MT copy

## Step3

Click on «Expert Advisors» button to activate advisors in Metatrader4.

Choose the currency pair you want to trade and open its chart window with price candles.

For example you want to run ForexAutoPilot for EURUSD M1 Chart.

Then **drag and drop** the advisor from «Navigator» menu to the chart window.

### Known Questions and Problems:

#### What TimeFrame and Currency should I choose?

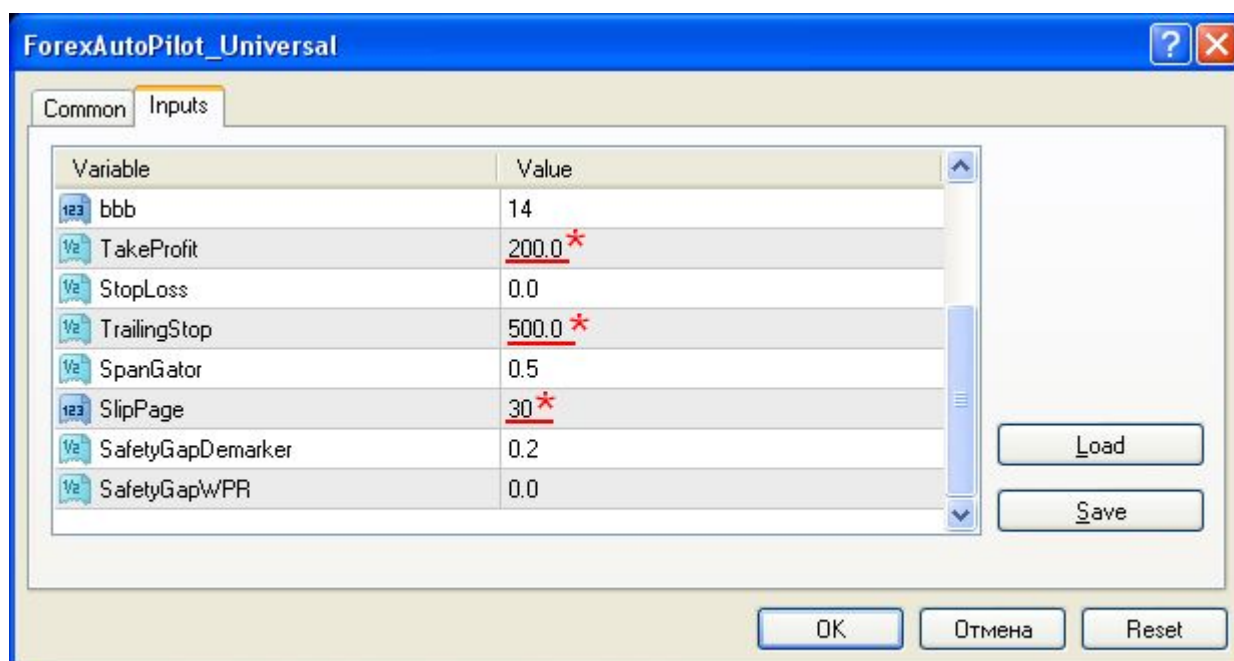

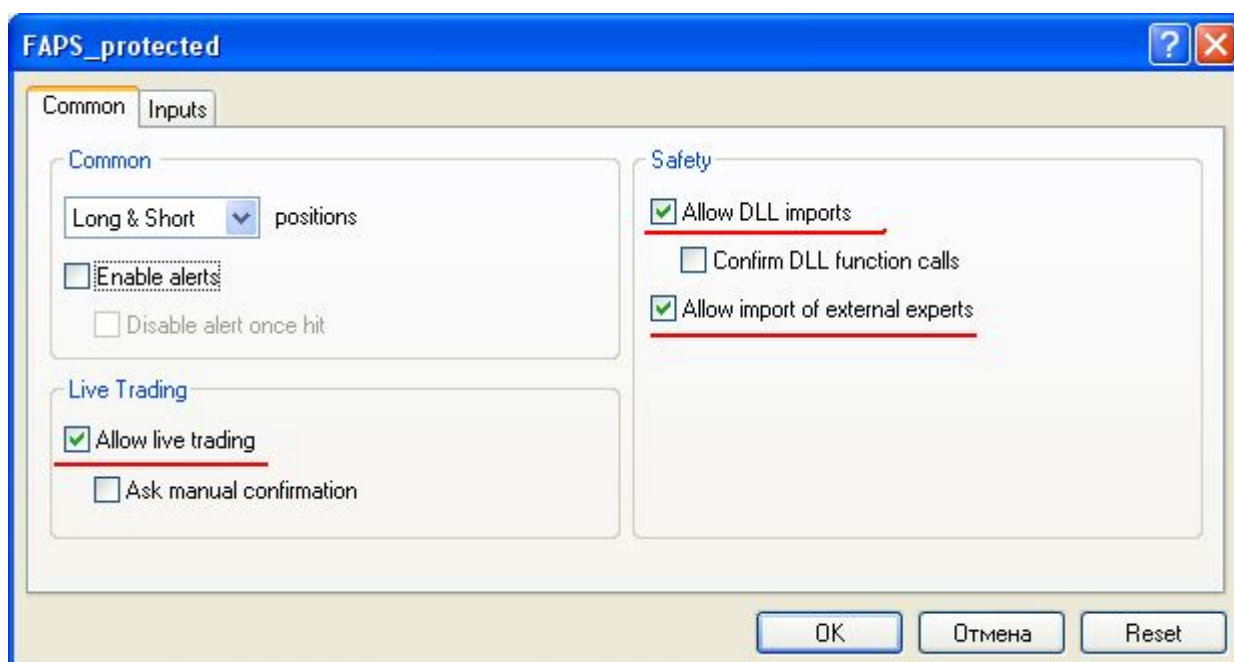

Please read the descriptions and parameters of each EA (robot) in forexautopilot\_robots.pdf that goes in package. You will find recommendations about what currencies to trade on and what lot to use and examples of strategy tests on historical data. For example ForexAutoPilot advisor works best on EuroUsd M1.

## Step4

After attaching advisor to the chart you will get the Window with Advisor's Parameters. You need to set Common «**Long and Short positions**» and enable checkbox «**Allow live trading**» to let advisor trade forex for you!

Also check «Allow DLL imports» and «Allow import of external experts» and deselect «Confirm DLL function calls».

You can also check and edit The Stop Loss, Take Profit and other parameters in «**Inputs**» menu. You can also load and save **presets** there.

\* For brokers with 5-digit price quotes (like Forexte broker)

**Note:** For brokers with 5 digit price quotes

**Some brokers have 5 digit price quotes (for example 1.12340)** If your broker uses 5-digit price quotes (like Forexte broker) then use takeprofit=200, Trailing stop = 500 and Slipage = 30. If your broker uses 4-digit price quotes (like Alpari and InterbankFx) then use default settings.

Then click **OK** to run the advisor!

If you set the advisor correctly you will see his smiling face in the top right corner of Chart window. That means that advisor is working and monitoring the market now.

**Note:** most of the advisors don't open the new orders instantly after you run them! Be patient. Advisor is monitoring the market and opens his trades only in condition of possible profits!

Experts-Robots open trades few times a week when their internal indicators see the market conditions to open trades. They don't have to open many trades or trade every single day. The role is to make profit, not to make many trades!

### Known Questions and Problems:

**When I drag any of the systems onto a chart I don't get the smiley face, just an X. I follow the procedure but it still doesn't respond**

Smiling Face icon means that EA works correctly. If you don't see smiling face and see just then click on "Expert Advisors" button on top of metatrader menu. See the Flash video on our <http://forexautopilot.com> webpage.

## Step 5: Activation

Now it's time to activate your copy of ForexAutopilot EA. In few minutes after starting FAPS EA you will get the following alert:

Record your Expert ID. For example my expert ID is 808923445

Then open your ForexAutoPilot Member Area on the website ForexAutoPilot.com and insert your expert ID to get your «Activation Key».

*On website member area:*

**STEP2:** Activate your Copy of FAPS EA NOW! Read file [HowToActivate.pdf](#) for full instructions.

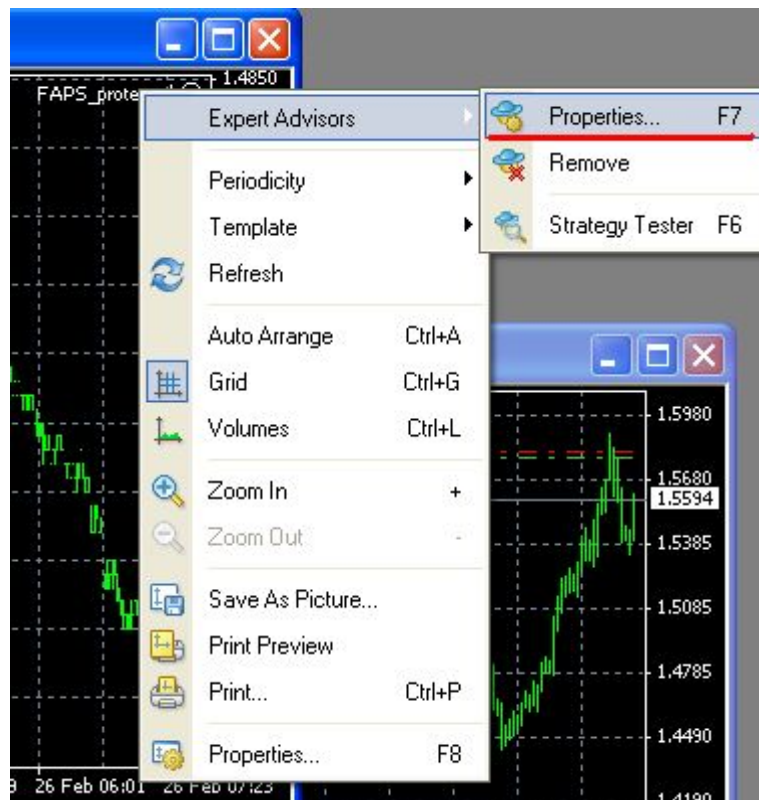

Insert your FAPS expert ID:

You will get:

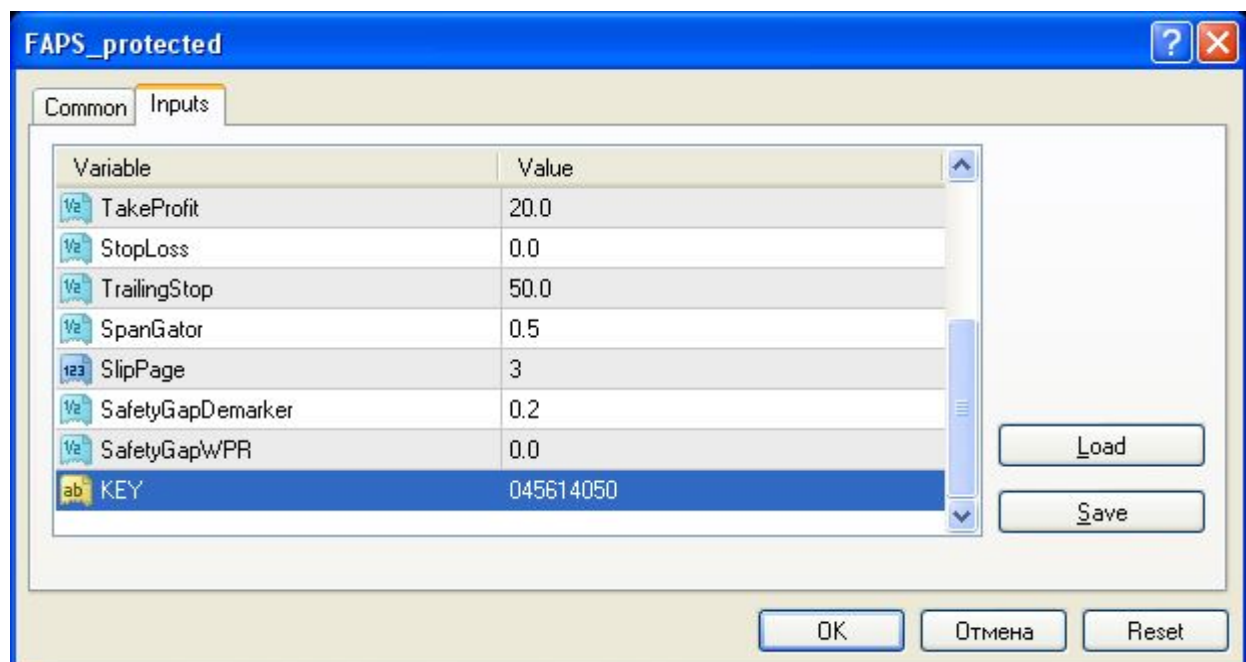

**YOUR Activation KEY=045614050**

Record the Activation Key. For example my Key 045614050

Now open Metatrader4 with FAPS attached to the chart and right click on the ForexAutoPilot Smiling Face on the right top side of the chart and select «Expert Advisors -> Properties» or press F7.

Click on «Inputs» tab and scroll down to «KEY» parameter and fill it with your Activation Key from the website!

**That's all!**

# Frequently Asked Questions

## Working Advisors

Advisors can only work when the connection to internet (in Metatrader4) is established.

**Warning!** You must always keep your Metatrader4 online and working to let the advisors trade. If you close Metatrader4 advisors cant monitor the trades and that could cause you possible losses of deposit.

Again, Forex Market is open 5 days a week. No trades on weekends

## Removing advisor

To remove advisor just right click on its name or face in right top part of the chart and select «Expert Advisors -> Remove»

Don't forget to close all open trades of the current advisor if you remove it.

## Important: Demo or Real account?

You should **Always** test your advisor on **Demo** account first to check if your broker is compatible with current expert advisor! **NEVER** trade on Real account without testing on Demo first!!

Maybe your broker takes your orders too slowly, gives bad quotes or too high spread or slippage. If so we recommend you to try demo account with another broker

## How to run several advisors on one account?

That is very easy!

You can run several advisors at the same time to increase your profits and minimize risks!

Just open several **Price Charts** and attach every advisor to its own chart!

So they all can work at the same time. Don't try to attach 2 advisors to the same chart, that won't work!

**Warning:** But don't run too many advisors if your deposit is too small. Try on DEMO account first to see how they work together! Some of the advisors are incompatible with each other and work bad if you run them together. Please always try on Demo first if you want to run several advisors at the same time! If you get bad results – don't run such advisors together or change your broker.

## What timeframe and currency should you choose?

There are not strict rules here. You can run expert advisors (robots) on any currency and timeframe. But we recommend using shorter timeframes. Feel free to experiment to find the timeframe that suits you better.

Also please read the descriptions and parameters of each EA (robot) in `forexautopilot_robots.pdf` that goes in package. You will find recommendations about what currencies to trade on and what lot to use.

Some experts-robots work only on specific timeframes and currencies. For example ForexAutopilot advisor works best on EuroUsd on 1M timeframe.

## Do you need to monitor the trades?

If you are too busy you can leave the advisors trade themselves for you. They will monitor the trades and close positions if needed.

If you are interested in trading and plan to adjust parameters of advisors you can watch the trades and try to optimize parameters.

Order /	Type	Lots	Symbol	Price	S / L	T / P	Price	Profit
16197473	sell	0.10	eurusd	1.4089	0.0000	1.4054	1.4108	-19.00
16205991	buy	0.10	gbpjpy	238.81	238.07	238.95	238.82	0.85
16206000	buy	1.92	gbpjpy	238.71	237.97	238.85	238.82	180.23
16206155	buy	0.57	usdchf	1.1832	0.0000	0.0000	1.1833	4.82
16206186	sell	0.53	gbpusd	2.0382	2.0395	2.0375	2.0383	-5.30

Balance: 10 000.00 Equity: 10 176.12 Margin: 5 906.80 Free margin: 4 269.33 Margin level: 172.28% 176.12

## **Which advisor is the best one?**

There is no clear answer to this question. Every advisor uses his own unique system of trading, each of them has its own strong and weak points. We recommend to run several advisors at the same time and test them on Demo to find out what advisor works best for you!

## **How to make backtest on history?**

To perform backtest you should attach the advisor to the chart in Metatrader4 and then press F6 (Strategy Tester). Then you should set the parameters, currency, timeframe and time period and then hit “start”.

## **Backtest on history is perfect but when I run advisor in realtime I get bad results. What is the problem?**

There could be two possible problems:

1. Your broker conditions are incompatible with current expert advisor (most frequent problem). Maybe your broker takes your orders too slowly, gives bad quotes or too high spread or slippage. We recommend you to try demo account with another broker
2. You run several advisors at the same time but they are incompatible with each other. Try to run them separately.

## **List of Brokers**

We recommend **ForexMeta** broker (FXDD) with MT4
